## Pick Up Pal pet safety restraint

The Pickup Pal (PUP) is designed as a safety restraint for dogs riding in the back of pickup trucks. By utilizing the existing tiedown points at the front of the truck bed, the PUP offers a safe and convient solution to pet restraint. The PUP will not only keep your dog(s) from jumping, or possibly falling from the back of your truck, the unique coupler swivel will keep dogs from becoming tangled. And, as a bonus, the PUP may keep you from having an unexpected encounter with the law since many states have laws against carrying unrestrained animals in the back of trucks.

To install the Pick Up Pal simply follow the photo illustration shown.

**Note:**

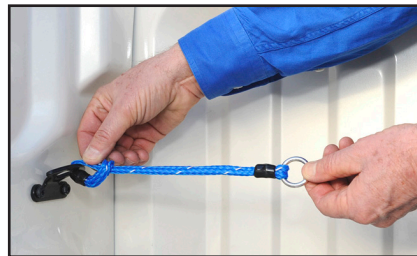

Two sets of Bed Adaptors are supplied. Use the appropriate length for the width of your truck bed.

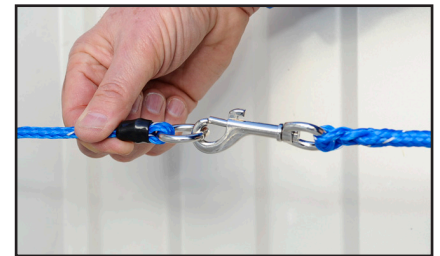

1. Insert the soft loop end of the PUP bed adaptor through the bed tiedown.

2. Thread the ring through the soft loop and tighten.

3. Tighten the loop onto the tiedown.

4. Clip the cross member to the bed adaptor ring on both side of the bed.

5. When installed the PUP will look like this.

6. Clip the bungee stretch sections to the coupler swivel at the center of the cross member.

7. Clip the bungee stretch sections to your dogs collars and you're ready to roll.

Handle is included when you purchase one or more dog attachments with the Pick Up Pal
